

Equity Residential is committed to providing its residents with a home that is clean, well-maintained and pest free. If, during your prospective tenancy, you suspect that there is any pest activity in your apartment, please contact the Leasing Office immediately so that we may inspect and treat the issue. Under California Civil Code section 1954.603, all applicants must be given the following general information regarding bed bug identification, behavior and biology.

Bed bug Appearance: Bed bugs have six legs. Adult bed bugs have flat bodies about 1/4 of an inch in length. Their color can vary from red and brown to copper-colored. Young bed bugs are very small. Their bodies are about 1/16 of an inch in length. They have almost no color. When a bed bug feeds, its body swells, may lengthen, and becomes bright red, sometimes making it appear to be a different insect. Bed bugs do not fly. They can either crawl or be carried from place to place on objects, people, or animals. Bed bugs can be hard to find and identify because they are tiny and try to stay hidden.

Life Cycle and Reproduction: An average bed bug lives for about 10 months. Female bed bugs lay one to five eggs per day. Bed bugs grow to full adulthood in about 21 days. Bed bugs can survive for months without feeding.

Bed bug Bites: Because bed bugs usually feed at night, most people are bitten in their sleep and do not realize they were bitten. A person's reaction to insect bites is an immune response and so varies from person to person. Sometimes the red welts caused by the bites will not be noticed until many days after a person was bitten, if at all.

Common signs and symptoms of a possible bed bug infestation:

- Small red to reddish brown fecal spots on mattresses, box springs, bed frames, mattresses, linens, upholstery, or walls.
- Molted bed bug skins, white, sticky eggs, or empty eggshells.
- Very heavily infested areas may have a characteristically sweet odor.
- Red, itchy bite marks, especially on the legs, arms, and other body parts exposed while sleeping.

However, some people do not show bed bug lesions on their bodies even though bed bugs may have fed on them. For more information, visit the websites of the United States Environmental Protection Agency and the National Pest Management Association. Please notify us immediately if you suspect bed bugs in your apartment, either by contacting the management office directly or via our resident portal, [My.EquityApartments.com](https://my.equityapartments.com).
